

**Description:**

Make a small photo album app with the following functionality:

- Home screen with a grid of square photos.
- Pull and release should refresh the photo grid.
- Tap on a photo should present a new view with the photo full-screen.
- Long press on a photo should show options to share (in either view).

Requirements:

- Must compile without errors or warnings.
- MVVM+RxSwift
- Unit Tests
- The app should work offline (Airplane mode or no internet).
- Use a public API such as Flickr (<https://www.flickr.com/services/api>)
- Pods should be used where it makes sense. Excessive reliance on Pods should be justified.
- Design decisions will also be taken into consideration.
